

Material files store rules

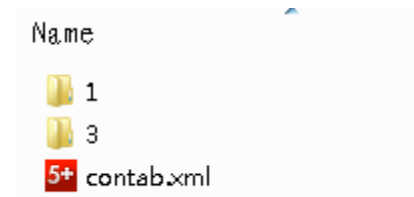

Please take English letters and numbers to name the material files, as the controller could not recognize different characters of all countries.

So we assign an unique identification for all PageName, WindowName and ItemName in Project file, which should be combined by 26 English letters and numbers.

/

/test

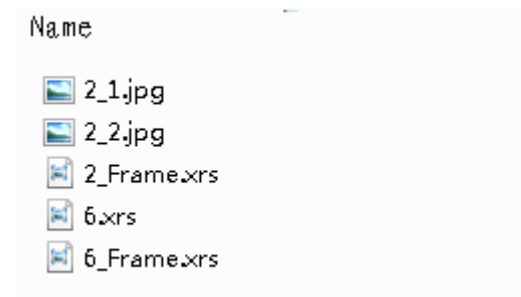

The folders under this catalogue are the material of Page element of .xml Project file
Property of Page element folder is PageName.

Above two pictures show that there are two Program pages in this project file.

Contab.xml is negotiation table file; please refer to “Negotiation table file instructions.docx” for details.

/test/1

Material files of Window Name will be saved under this catalogue

2_1.jpg : 2 means window name 2 of PageName 1 in .xml project file

1 means material file of itemName 1 under this WindowName.

For example:

2_1.jpg, 2_2.jpg are the two image files of WindowName2 of PageName 1.

2_Frame.xrs: Means the frame style figure of this Window. (if no frame then will not create this material)

Xrsfile format is tiff.

6.xrs: 6 means WindowName 6 of PageName 1

6.xrs is the material of this window name.

For example: 6.xrs is material of window name 6 of page name 1. If the window name is Date/ Time window then one window could only create one material file.

Note: The material file extension must be lowercase format. Support "bmp, jpg, gif, xrs, avi", not support "jpeg", if the file is "jpeg" modify to "jpg".
